

## Ledlenser flashlights EX series

A person who works in potentially explosive areas, using electronic devices, must pay attention to the highest level of safety. This level is set in the EU ATEX directives. Ledlenser EX and iL flashlights meet these standards in every respect. They have been specially made for contact with explosive gases, vapors and dusts, in the groups with the highest risk IIC and IIIC. Our products are extremely dust and water resistant and certified according to the ATEX regulations in force worldwide. Both series of flashlights are suitable for use in various potentially explosive atmospheres and comply with the ATEX directive. The EX series flashlight can be used in zone 0/20 and the iL series flashlight in zone 2/22. There is a suitable flashlight for every area!
